

Spatial Variation In Invertebrate Communities In New Zealand Braided Rivers

by Duncan Gray; Jon S Harding; New Zealand

Large braided rivers are a distinctive feature of the landscape in several regions of New Zealand. The invertebrate communities of braided rivers have been investigated by Duncan Gray and Jon S. Harding. Spatial biodiversity patterns in a large New Zealand braided river. Duncan Gray. School of investigated benthic invertebrate communities at 103 sites in braided channels. Springs were the coolest and showed least variation. Spatial biodiversity patterns in a large New Zealand braided river. Cramer Fish Sciences The Recovery of Benthic Invertebrate Communities Following a Disturbance (prepared for NZ Climate Change Office, Ministry for the Environment). S. (2010) Spatial variation in invertebrate communities in New Zealand braided rivers. Spatial variation in invertebrate communities in New Zealand braided rivers. GRAY, D. & HARDING, J. S. (2007): Braided river ecology. A literature review Spatial Variation In Invertebrate Communities In New Zealand. Spatial Variation Publications list - Duncan.P. Gray Nov 15, 2006. Spatial biodiversity patterns in a large New Zealand braided river. DUNCAN GRAY investigated benthic invertebrate communities at 103 sites in braided channels centres of invertebrate diversity within braided river catchments. Springs were the coolest and showed least variation, being consistently. Spatial Variation in Invertebrate Communities in New Zealand.
